Multi-Sample Test System

Test multiple samples at the same time

Increase Productivity - Reduce Test Costs - Consolidate Test Stations

A Custom Test Solution Designed To Increase Productivity & Reduce Costs

Two words best describe the benefits afforded by United's Multi-Sample Test System: **HIGH PRODUCTIVITY**. Test up to six samples at once for increased productivity and efficiency. Combine and consolidate multiple test stations into a single unit reducing ownership costs while increasing your productivity.

Each test system is a PC Controlled unit that is capable of testing up to six samples simultaneously. Data from each sample are recorded in real-time by United's DATUM 5i software program and stored in an easily searchable and retrieveable Microsoft Access™ database.

The Multi-Sample testing system is recommended for high-volume, repetitive testing of plastics, rubber, film, elastomers and thin metals. The 60° angled frame configuration allows easy sample loading compared to a traditional vertical test frame. The system is available with a pneumatic gripping system, clamping extensometry devices, strain gauge load cells, sliding safety window and heavy-duty casters that allow for easy movement.

Standard System Specifications

Drive System	Ball Screw
Loading Stations	Up to 6
Load Cells	Up to 6
Load Cell Accuracy	+/- 0.5% of indicated reading
Grips	Pneumatic
External Dimensions	120"W x 56"T x 32"D
Weight	Approx. 650 Lbs
Software	Datum5i
